

INTELLECTUAL OUTPUT 2

ROUND TABLE REPORT ON DEVELOPMENTS OF EQF LEVEL 5 QUALIFICATIONS IN PARTNER COUNTRIES

LEADING PARTNER:	<i>Klaipeda E. Galvanauskas Vocational Training Center, Lithuania</i>
CONTRIBUTING PARTNERS:	<i>ESSENIA UETP – UNIVERSITY AND ENTERPRISE TRAINING PARTNERSHIP S.R.L., ITALY</i> <i>FUNDACIÓN LABORAL DEL METAL, SPAIN</i> <i>ESPROMINHO, PORTUGAL</i> <i>VILNIUS JERUZALEM LABOUR MARKET TRAINING CENTRE, LITHUANIA</i> <i>KARALIUS MINDAUGAS VOCATIONAL TRAINING CENTRE, LITHUANIA</i> <i>QUALIFICATIONS AND VOCATIONAL EDUCATION AND TRAINING DEVELOPMENT CENTRE, LITHUANIA</i>

2017, December

Introduction

This document is a second report within the Erasmus+ project *Development of Sectoral Qualification Descriptors for EQF level 5* aiming to provide basic elements and recommendations for development of sectoral qualification descriptors oriented towards increasing transparency and recognition of skills and qualifications, facilitating learning, employability and mobility.

Results of the Project Intellectual Outputs 1 and 2 will be used to prepare methodology for the development of Internationally comparable qualification descriptors at EQF level 5 in selected sectors. Internationally comparable qualification descriptors could be used as a platform for developing new qualifications, allowing learners to move more easily between different types of education (such as higher education and vocational) and between different levels (such as VET and higher education) at home institutions as well as internationally. Data for Project intellectual outcome 2 comes from the results of Roundtable discussions with different types of stakeholders organised in four partner countries.

Project “Desquades” takes into account the diversity of national systems and aims to improve tools for facilitates the translation and comparison of qualifications between countries. For this, reference to the EQF is a main tool which enables qualifications systems with their implicit levels or/and national and sectoral qualifications frameworks to relate to each other is very important. EQF allows each country reference its national qualifications (in terms of diplomas, certificates or awards) to the eight EQF levels via national qualifications frameworks or the implicit levels in the national qualifications systems. For Roundtable discussions reference to EQF level 5 descriptors of knowledge, cognitive and practical skills and competence are very important. In EQF level 5 knowledge are described as follows:

Knowledge:

• *Comprehensive, specialized, factual and theoretical knowledge within a field of work or study and an awareness of the boundaries of that knowledge;*

Cognitive and practical skills:

• *A comprehensive range of cognitive and practical skills required to develop creative solutions to abstract problems;*

Competence is described in terms of responsibility and autonomy.

Exercise management and supervision in contexts of work or study activities where there is unpredictable change; review and develop performance of self and others.

These descriptors serve as a good reference point, but the variety of qualifications linked to EQF level 5 and varied use of EQF level 5 in Europe suggest that these descriptors are

too narrow to present full potential of this level and to present full range of knowledge, skills and competencies existing.

In May 2016 the European Council published a recommendation on the EQF, as an update of the introduction of this framework in 2008: “Council Recommendation on the European Qualifications Framework for lifelong learning and repealing the Recommendation of the European Parliament and of the Council of 23 April 2008 on the establishment of the European Qualification Framework for lifelong learning”. It is stated there that the EQF and national qualifications frameworks or systems, by using the learning outcomes approach, should better support individuals when moving between various levels of education and training, within and between sectors of education and training, between education and training and the labour market and within and across borders. For these purposes development of sectoral qualification descriptors should be considered as highly important.

Roundtable discussions organised within project „Desquades“ aim to define in more comprehensive way main features of level 5 qualifications in partner countries, and so increase transferability of qualifications and the promotion of lifelong learning. The roundtable discussion served for several purposes: helped to identify the needs of main stakeholders and different groups of interest (representatives of employers, VET training and Higher education institutions, learners and broader public) and allowing to discuss broader possible benefits from EQF level 5 potential for learners, employees and labour market providing advanced VET skills and competences.

Roundtable discussions were organised as a focus events to closely explore specific issues identified elsewhere or to identify new issues of level 5 qualifications, not addressed before, and therefore can be used to explore solutions, define actions, develop strategies. This report of results of Roundtable discussions is intended to provide an overview of opinions expressed at an events held in 4 countries in 4 different sectors on qualifications at level 5 and possibility to exploit better the potential of this level.

Aims and structure for Roundtable discussions

The aim of round table discussion was to discuss need for and potential of EQF level 5 qualifications from the perspective of main existing and possible stakeholders. Also:

- Identify the function of qualifications at level 5;
- Find out what are the areas of occupational activity of the sector at level V;
- Specify the type of qualifications functioning in the labour market at level V;
- Identify “missing” or possible qualifications (if any).

Roundtable discussions supposed help to identify what could be possible interest of employers on development of new (or revision of existing) level 5 qualifications from the perspective of main stakeholders. Also round tables provided an opportunity for participants to share and explore perceptions, experiences and concerns surrounding the development of EQF level 5.

The round table discussions were organized during August and October 2017.

General agenda of the discussions is presented in the table:

Agenda for Roundtable discussion	
Introduction	Presentation of the Erasmus+ Programme and KA2 action project “Desquades” : aims and activities, partnership and results to be achieved.
Open Discussion	Type of EQF level V qualifications in sectors, role and functions of these qualifications. The EQF level 5 in
Questions for Roundtable discussions	
What could be possible interest of employers on development of new (or revision of existing) level 5 qualifications from the perspective of main stakeholders?	
What could be if any sector specific approaches defining learning outcomes: <i>Knowledge;</i> <i>Skills;</i> <i>Competence.</i>	
What is scope and level of key competences (Such as autonomy, responsibility, quality assurance, entrepreneurship)?	
Do these qualifications contribute to the promotion of lifelong learning:	<ul style="list-style-type: none"> -improving understanding of learning routes and qualifications and how they relate to each other; -improving access to education and training opportunities; -creating incentives for participation in education and training; - making progression routes easier and clearer; -increasing and improving credit transfer between qualifications; - ensuring that education and training providers meet certain quality standards; -securing international recognition for national qualifications.
How level V correlates with level 4 and level 6 qualifications? What could be learning pathways leading to qualification at level V in sectors?	
Summary and conclusions	

Types of participants of Roundtable Discussions

Approximately 150 participants (employers, training/ study providers, learners, representatives of employees' associations) participated in events organised in four countries. 5 seminars have been organised in Lithuania and 1 in Spain, Portugal and Italy Table below shows the range of the different interest groups represented:

Table no 1. Main stakeholders of Roundtable Discussions

<i>Types of stakeholders</i>				
Representatives from vocational education and training	√	√	√	√
Representatives from higher education institutions			√	
VET teachers and trainers	√	√		√
Representatives of employers from selected sectors;			√	√
Skilled employees from the sectors		√		√
Representatives of relevant professional bodies	√	√	√	√
Researchers		√		
State agencies, responsible bodies, including those responsible for qualifications, vocational training development		√	√	√

OUTCOMES OF THE ROUNDTABLE DISCUSSIONS

I. EQF level 5 qualifications across countries

Most EQF level 5 qualifications are clearly linked to occupations/professions. They are not only considered an intermediate step towards a bachelor degree, but also as independent qualifications with distinct professional profiles and labour market relevance providing advanced VET skills and competences, potentially responding quickly to new labour market demands. Many EQF level 5 qualifications are designed to upskill people already in employment and provide them with advanced technical and/or management skills. Learners enrolled in programmes leading to an EQF 5 qualification could be very different background from various groups as regards their education, age and/or work experience. Many EQF level 5 qualifications are designed to upskill people already in employment and provide them with advanced technical and/or management skills.

There is big diversity and complexity in types of level 5 qualifications based on learning outcomes across countries and these qualifications play a significant role in the labour market and for further learning. In the area of level 5 Higher VET and Short Cycle HE important types of qualifications, involving VET providers and HE institutions can be found at initial and continuing vocational education and training, general education, or entirely outside the formal education and training system. Typical level 5 qualification is provided by and are not limited to short-cycle higher education programmes.

Different types of qualifications can be found in DESQUADES partner countries at this level:

- Higher level VET technician
- Highest level of professional worker (specialist) in construction or metal industry
- Higher level professional qualifications (polytechnics);
- Higher VET Certificate.

Round table discussions have been organized in order to find out what could be the potential benefit from EQF level 5. From the discussions it could be concluded, that level 5 qualification could be regard as an independent qualifications with various professional profiles and labour market relevance providing advanced VET skills and competences, potentially responding quickly to new labour market demands.

In the Portuguese case, the level 5 qualification courses are still fulfilling operational objectives:

- to enable young people who complete secondary education to progress to a higher level of professional qualifications, through polytechnics (technologically privileged and highly vocational when it comes to work and business world), to the detriment of universities;

- to encourage young people to refine their scientific and professional competences by deepening the knowledge and skills acquired in Level 4 professional courses and opening the way to higher education qualifications, correcting the impartiality of the assessment by national examinations, which are based on general curricula insensitive to all the diversity of training courses that young people can attend until they reach admission to higher education.

Role of level 5 qualifications

The importance of level 5 qualifications is growing in all partner countries for several reasons. First, they are developed as response to increased needs for advanced technical and/or management skills in a rapidly changing labour market and ageing workforce. Second, the data show that EQF level 5 qualifications are especially attractive to students with vocational education and training (VET) backgrounds and those already in employment. They contribute to lifelong learning by being accessible and attractive for adults and non-traditional learners. Third, they are seen as valuable and relevant by employers, as most include some form of work-based learning.

EQF level 5 is often considered as the zone of overlap between vocational and higher education, although all levels of the EQF (i.e. also levels 6 to 8) are supposed to be open to qualifications acquired outside the higher education context. In this role of zone of overlap, level 5 can provide a missing link between different levels and types of education. It is clear, though, that today level 5 is underdeveloped and that its adoption would require more awareness and financing. Current close collaboration between key stakeholders will hopefully improve this situation.

In Lithuania developments of level 5 are strongly linked to the needs of learners and the labour market. It is necessary to provide opportunities to acquire higher level qualification for those who are already in the labour market. Therefore, higher level studies with a vocational focus and workplace learning represent a very valuable way to address the concerns of high unemployment and the shortage of higher level skills required in a labour market.

There is a need to better understand the dynamics that need to be established between students, job market and schools to build level V courses that fulfil everyone's needs and that the government must be involved in the process and organization of these dynamics. A committee has been organized to further analyse and communicate conclusions to other stakeholders aiming to develop the implementation of Level V qualifications in society.

Level V qualifications are a way to achieve society's goals, but their recognition in the professional and educational context is still weak. There is a need to implement more and better level V qualifications basically because of two very important reasons. The first reason is that it is a means to an end. In Portugal Level 5 qualification, in many cases represents the first step in acquiring a higher education for those that had never felt that need before. The second reason is to improve the professional skills of those that wish to enter the job market or to improve those that need to update their professional skills to better respond to the job market needs.

In the Portuguese case, the level 5 qualification courses are still fulfilling operational objectives:

- to enable young people who complete secondary education to progress to a higher level of professional qualifications, through polytechnics (technologically privileged and highly vocational when it comes to work and business world), to the detriment of universities;
- to encourage young people to refine their scientific and professional competences by deepening the knowledge and skills acquired in Level 4 professional courses and opening the way to higher education qualifications, correcting the impartiality of the assessment by national examinations, which are based on general curricula insensitive to all the diversity of training courses that young people can attend until they reach admission to higher education.

Level V offers a pathway to higher education that relieves students of access exams. It relates to the deepening the knowledge and skills acquired in Level 4 or Level 3, higher level of technical and management skills, progress in career and further education (at

university level).

The variety of qualifications linked to EQF level 5 suggest that this level has the potential to play a very significant role in bridging subsystems in the transferability of qualifications and the promotion of lifelong learning. EQF level 5 can provide the opportunity to strengthen the connection between higher education and VET and adult education, as well as for widening access to higher education. However, EQF level 5 could also represent a second choice for students who do not have access to traditional academic routes or who have failed in it and so could appear to be at a dead end.

Involvement of social partners into qualification developments in sector

How social partners are involved into development of qualification differ from country to country. However, participants of roundtables agreed on the importance of the dialogue among the actors involved in the development of the qualifications, especially new types of qualifications corresponding the needs of learners and the labour market.

In Spain, they are not involved directly. This work is done at very high level in the central government with national representatives of Ministry of Education, Ministry of Labour, Labour Unions and Trade Unions. In theory all these national representations take into account the needs and reality of all companies, workers and public policies distributed in all country.

In Italy, the ITS are the main organizations authorized at providing level V qualifications. They are regulated and disciplined by the Ministry of Education in their organizational structure, in concert with the Ministry of Labor. The training offer is planned by the single Italian Regions. The regulation disciplining ITS is a Ministerial decree of 2015; it establishes that once a year a conference of services must be held; this is currently at its early stage of implementation. In this conference all the actors of the economic and social partnership are involved. All the training offer of ITS is organized taking in account systematically and periodically the contributions coming from the economic and social partnership. Furthermore, the structure of the ITS itself includes these actors.

The Regional Catalogues of Qualifications are built by the Regions through mechanisms of consultation at local level that are organized by each Region autonomously according to their own dynamics. When the definition of new qualifications is needed, the Region consults and confronts the economic and social partnership, actively involving them.

Periodically, the Regions create lists of experts from sectorial fields and held courses at training experts as “Technician supporting identification and transparency of Competences” and “Technician for planning and carrying out evaluation activities”. Thus, in perspective, an increasingly active and operative involvement of local actors from the economical and entrepreneurial sectors linked to the qualifications is expected.

This involvement will contribute to map of the development of the productive fields in the specific sectors in determinate areas, enhancing the links between the world of

education and the world of work.

As case of Portugal shows, all stakeholders have they individual need from level 5:

- learners/students – are those that have the dilemma about whether or not the investment in higher education is worth it.
- government departments – discussed the qualification needs in different sectors to better respond to employment and economic needs.
- providers of education and training – discussed the policies that may be necessary to promote more higher education.
- representatives of employers and workers discussed the necessity of qualifying workers.

In Spain stakeholders are not involved directly, as this work is done at very high level in the central government with national representatives of Ministry of Education, Ministry of Labour, Labour Unions and Trade Unions. In theory all these national representations take into account the needs and reality of all companies, workers and public policies distributed in all country.

As Lithuania lacks level 5 qualifications. Discussions with employers, however, have revealed a need for such qualifications, especially for master craftsmen technicians and supervisors. Policy-makers are currently setting up legal conditions for introduction of level 5 qualifications.

Correlation with EQF levels 4 and 6

It is obvious, that level 5 is very strongly interrelated level 4 and level 6 and in some cases even dependant on these levels.

In case of Italy, the level 5 represents an interstitial level between school and university. Given the above, professional profiles at level 4 operate in the “production”: the Operator does his job with a degree of problem solving that allows him to distribute and organize its work as well other’s work, on the basis of the activities do to. He has a deep comprehension of the phenomena and so he can be operative, organize and supervise the carrying out of the activities. The level 5 makes it clear that the approach of the levels in qualitative: the level 5 could be considered as parallel to the level 4; it is a technical and specialized professional figure that has a responsibility also on the quality of what it is realized, and so it has the capacity to evaluate products and processes realized.

In Portugal Level V offers a pathway to higher education that relieves students of access exams. When students finish a level V qualification, they may enter a level 6 course directly, in which some credits acquired during level V course will transition to the level 6 course, relieving them of the need to repeat some subjects.

In Lithuania Level 5 is under development, but still it often could be seen as insufficient, having a lower status – less than the Bachelor, not much more than certificate of

vocational education and training. In fact level qualifications should be regarded as something different – having they own quality. So, it will in most cases compared with level 6 (by students, parents, influencers, politicians...). Often it is supposed what the competences are of someone having a diploma at level 5.

Importance of key competencies at level 5

One of the tasks during discussions was to broader scope of general knowledge, competencies and skills that are considered important to EQF level 5 not related to any specific occupation or sector. Considering this as important aspect of development of new qualifications and assessing non-formally acquired skills it was important to find out what skills, knowledge and behaviour that lead to successful performance at level 5 are most important? The discussions outlined that at level 5 competencies more or less important for all sector can be grouped into 3 clusters: management related or organisational competencies, personal skills and behaviour and social skills.

In case of Italy the level 5 professional figures are characterized by the competences as autonomy, responsibility, capacity of evaluation of the work from the qualitative point of view, it's a kind of internal evaluator of the production services. Thus, it is a profile that has the role of operating in the framework of internal quality mechanism and cooperating to its development. Also, the profiles at level 5 should have good communication skills, since these professionals have the opportunity to contribute to the improvement of the internal quality within the working environment in which they act Is for this reason that level 5 places side by side to level 4 (that has an executive role) and is also a support for level 6 professionals, that have a management role.

In Spain, autonomy, responsibility, quality assurance are emphasised then referring to this type of qualifications.

In general main key competences mentioned during roundtable discussions refer to independence or autonomy of work, responsibility and entrepreneurship and such an important aspects as quality assurance.

Summarising all that was said during round table discussions, these competencies were mentioned as important for this level:

Table no. 2. Key competences, indicated as important for level 5

Organisational	Personal	Social
Leadership and Management and distribution of tasks	Flexibility (ability to adapt to new situations)	Communication with customers and upper management
Planning materials, tools, equipment and resources	Autonomy	Ability to work in an international context

Management of risk and problem solving	Responsibility	Negotiation competence
Management and distribution of tasks	Entrepreneurship, imitativeness	Conflict management
Quality control	Capacity to applying knowledge and imbedding innovations	Customer orientation
Project management	Learning to learn	Ability to work in team
Training of lower qualification subordinates	Quality orientation	

The list of key competencies mentioned in the discussions helps to define better what level 5 actually means in an organisation, that management related task can be entrusted for the professional at this level and even the relationship with the levels 4 and 6. Last but not least, from the discussion held it was clear that entrepreneurial competences are relevant for organising the daily work and taking initiative on self-employability.

Further developments related to the level 5 qualifications

The Level 5 Area is a relatively new concept for Europe, giving an excellent opportunity to link the sectors for Vocational Education and Training and Higher Education. This can lead to more flexible learning paths for students and adult learners, making them possible at all times in their lives. Particularly by using also at level 5 programmes and qualifications beyond the formal public-financed system - such as business education, in-company training and vocational courses - effective procedures for recognizing skills acquired earlier and elsewhere as recognition of prior learning, can be put in place. It is also advisable to see whether there are similar developments in level 5 qualifications in other parts of the world. If so, then it may be useful to have further discussions and to share experiences and good practices in a future. Further developments could be focused on:

- creating incentives for participation in education and training
- creating carrier progression routes;
- increasing and improving credit transfer between qualifications;
- update the existing professional profiles including further knowledge, competence, skills;
- creating new professional profiles at level V

Experiences and good practices of adult learners in formal and non-formal programmes on level 5 (offered by institutions that are selected by companies) must be used for developing in the next years new and creative arrangements, to have more flexible work-based learning pathways starting from level 4. This can help to raise the status of Higher VET at level 5, if adult learners want to get a qualification at a higher level. It can also represent a choice for youngsters for a more attractive HVET programme, next to a study in Higher Education.

It is clear that qualifications at level 5 contribute to the promotion of lifelong learners being an interstitial level between the productive and managerial ones and a bridge from the world of vocational education and the world of work.

Level 5 qualifications in different sectors

EQF level 5 potential in service sector (textile)

Roundtable organised by Karalius Mindaugas Vocational training center involved representatives from Kaunas region private and public limited liability textile companies, 5 representatives from Kaunas region VET and HE institutions and representatives from Karalius Mindaugas VTC administration.

It became clear that currently “highly qualified staff” are being trained in companies by themselves with the help of other experienced staff or by sending staff to individual/random trainings to acquire specific competences. Also, employers have expressed interest in cooperation with VET institutions preparing “highly qualified staff” for textile industry. As very important aspects flexible learning schedule and ability to combine work with learning at the same time has been mentioned.

The observations of the participants of discussion allows to assume that there is a demand for employees with EQF level V qualification.

It was important to find out what knowledge and skills are important for “highly qualified staff” in industry and which professional activity areas are the most important.

Table presents the essential knowledge and skills of highly skilled workers in textile sector.

Skills of sewing, modelling and designing of high quality textile products was discussed as well as general (key) skills, such as quality assurance and supervision of other staff. It was agreed that overall “highly qualified staff” must have experience in the professional field and must possess general competencies. Most important skill in which level 5 professionals have to demonstrate mastery is clothing design. The most important skills to be developed while preparing “highly qualified staff” in terms of professional activity areas are: quality assurance, occupational safety assurance, improvement of working methods and technologies, management of lower qualification staff, risks and unexpected problems management.

Discussion allowed to indicate which skills of “highly qualified staff” are missing at the moment:

- Field specific skills - lack of construction skills and high quality sewing skills. However, talking about possible curriculum the participants of discussion stressed the need of training modules designed to broaden understanding of the industry and acquire more general industry related knowledge instead of going deeper into very specific field or competence.
- General skills - responsibility, leadership, training of others, communicability, planning, organization, process management, stress management.

Level 5 in metal sector (Welding)

Discussion organised by Vilnius Jerusalem Labour market training center allowed to identify what skills are most important for high level welding specialist. Discussion have been divided into two parts.

General part of the discussion aiming to identify what functions do professionals at EQF level 5 perform and what could be examples of their job task descriptions? How do we know that this is level 5 professional, that shows that competences are higher than EQF level 4 but lower than EQF level 6? The growing internationalization of products and services value chains has triggered an increasing number of international (sectoral) qualifications industry-based training and certifications, based on standards developed by international companies or sectoral organizations, like the welding sector.

Specific part of the discussion trying to identify what skills and competences are important in specific sector (metal industry, construction, service sector or health care sector).

Discussion let to identify key areas EQF level 5 qualification welder. These are: welding processes, welding materials, production processes, visual evaluation and control of welding joints.

Also, it was agreed that the most important competence for EQF level 5 qualification welder are:

- Demonstrate mastery in Combining welding equipment;
- Perform welding processes in accordance with welding procedural descriptions;
- Prepare welding materials for welding;
- Measure main welding parameters;
- Distribution of tasks;
- Training of lower qualification welders and evaluate competences of welders;
- Adopting new working methods;
- Employing spoilage preventative measures;
- Act properly in critical situations;
- Estimate the innovations of the processes and comprehensive technology;
- Organise general welding safety measures.

Table presents the essential knowledge and skills of highly skilled workers of welding sector. Discussion also allowed to agree that competences of EQF level 5 qualification in

this sector could be divided in two groups: to professional welder competences and organisational/managerial competences.

Table no. 3. Level 5 in Welding sector

<i>Areas of activity/level of achievement</i>	<i>Knowledge/information</i>	<i>Skills (ability to perform)</i>	<i>Demonstrate mastery</i>	<i>Not relevant</i>
1. Welding processes;			√	
1.1. Stainless steel welding in various dimensional positions (PA, PB, PF, PG);			√	
1.2. Automated welding (orbit MIG, TIG welding)		√		
1.3. Laser welding		√		
2. Identify need and calculate welding materials		√		
3. Organise and control production processes		√		
4. Provide visual evaluation and control of welding joints.		√		
5. Manage work of subordinate welders		√		
6. Train other employees and assess their competences		√		
7. Constantly improve working methods and technologies		√		
8. Assure quality of work			√	
9. Perform risk management and act in		√		
10. Implementation of sectoral innovations and trends of technological processes		√		
11. Ensuring safety at work			√	
12. Rational use of the resources		√		

EQF level 5 in construction

Round table organised by Klaipėdos Ernestas Galvanauskas VTC discussion indicated that for level 5 professional in construction has to have knowledge in technology of construction, materials, tools and equipment used on site for production and how it functions, also have to know how to apply instruments and tools of measurement and to read working drawings for construction projects. Other important aspect is knowledge in regulations, norms and standards on national as well as EU levels relevant to the functions performed on site, also safety and health at work regulations, environment issues and be able to control how these regulations are respected in working place.

Most important work in the frame of construction projects is to link the phases of planning and execution. Employees in charge with this work do not have to be able to execute planning themselves, but they must understand principles and forms of planning and be able to transform the results of planning into detailed, short termed work plans and into a practical work organisation on site. They also have to be able to conduct and to supervise the work, to dispose labour, equipment and material in the frame of the overall planning, and to take responsibility for the fitting of results with tenders specifications, quality norms and deadlines. Last but not least, they must be able to take over responsibility for health and safety as well as for environmental issues. For this work knowledge, skills and competence on level five are required.

Specific knowledge at level 5, such as technology of construction, tools and equipment used on site for production and how they are functioning are important, as well as knowing methods and tools for measurement and representation of land and construction details and of working drawings. Deep knowledge of materials used on site for production and its characteristics also have been mentioned. Level 5 specialist also have to know in comprehensive manner standards, rules, norms and legal duties on national as well as EU levels relevant for production on site, quality management, health and safety issues and basic elements of training of apprentices in a form of work based learning.

Applying knowledge about responsibilities, roles, competence, rights, duties and way of work of other actors involved in construction projects have been mentioned during discussion as well.

Table no. 4. Knowledge, skills and Competences for level 5 in Construction. Table No.

<i>Areas of competence/level of competence</i>	<i>Knowledge/information</i>	<i>Skills (ability to perform)</i>	<i>Expertise</i>	<i>Mastery (high level of professional skills)</i>
Tools, equipment	√			
Construction materials	√			
Rules, regulations, documentation	√			
Work organisation procedures	√		√	
Basic and new construction technologies and work process		√		
Overlapping/interrelated technologies		√		
Team work/ Organisation of work flow				√
Communicate with client and construction engineers/project managers				√
Planning work of oneself and the				√

others				
Training of lower qualification workers			√	
Ability to train apprentices			√	
Work safety and health	√	√		
Rational use of the resources		√		
Responsibility for overall quality			√	

Level 5 in construction professional also knows how to apply methodology and procedures of planning, transformation of planning into production, control construction projects, quality control, surveying, marking and measurement, management of production on site (labour, equipment, material) including timetables, cost and return control systems, how to organise non-formal and support informal learning on site.

Also this level professional is involved in all stages of construction project management processes: taking part in planning (materials, tools, resources), organising and executing (taking care of the main work flow and distribution of tasks as well as monitoring and assessing of results and overall quality).

Conclusions

The roundtable discussion served for several purposes: helped to identify the needs of main stakeholders and different groups of interest (representatives of employers, VET training and Higher education institutions, learners and broader public) and enabled to discuss broader possible benefits from EQF level 5 potential for learners, employees and labour market.

Round table provided more detailed information about knowledge, cognitive and practical skills and competence than referential EQF descriptors, but all findings correspond to descriptions provided in European Qualification Framework, showing that knowledge are of comprehensive, specialised nature, within *a field of work* or study and an awareness of the boundaries of that knowledge.

Discussions allow to provide a general portrait of potential EQF level 5 qualification, what could be applied broader than in one sector or occupation. Basically qualification could be divided into four main building blocks: sector or occupation related knowledge, skills and competence, management/organisation related knowledge, skills and competence, personal skills and competence and social skills, related to advanced VET skills and competences. One of the tasks during discussions was to broader scope of competences and skills considered important to EQF level 5. organisational social and personal competences also have been discussed. Considering this as important aspect of development of new qualifications and assessing non formally acquired skills. Set of all main areas of skills, knowledge and competence is presented in the table:

Table no. 5. Main domains of skills, competence and knowledge at level 5

Sector/occupation related	<i>Organisational</i>	<i>Personal</i>	<i>Social</i>
Work Process Related Technologies	Management and distribution of tasks	Flexibility (ability to adapt to new situations)	Communication with customers and upper management
Methods of execution, organisation of work flow	Planning materials, tools, equipment and resources	Autonomy	Ability to work in an international context
Application of tools, use of special equipment, distribution of resources;	Management of risk and problem solving	Critical and self-critical abilities	Negotiation competence
Application of norms, regulations, standards.	Management and distribution of tasks	Entrepreneurship, imitativeness	Conflict management
	Quality control	Capacity to applying knowledge and imbedding innovations	Customer orientation
	Project management	Learning to learn	Ability to work in in an international context
	Training of subordinates, Evaluation of work of others, giving feedback on quality of work	Quality orientation	

Through this could be regarded as a general tendency, this is not necessary the rule in all sectors, but these findings could help to broader the understanding of what level 5 professionals actually represent and there for to help define main parameters of sectoral qualification descriptors.

The challenge of sectoral level descriptors is that they need be very broad enough to accommodate national variants and at the same time they need to be context specific.

Roundtable discussions helped to identify the typical achievements and attributes associated with the level qualifications in general. The next important step is to identify more precisely the level of difficulty and complexity associated with tasks and functions performed at a workplace. In different sectors at this level.
